Model 1600 Non-Electric Distiller from Natural Solutions Environmental, Inc.

- (1) Water is heated in the **Stainless Steel Boiler** to 212 Fahrenheit killing microbes such as **Bacteria, Cysts (Cryptosporidium, Giardia, etc.) and Viruses** that may be present in the source water.
- (2) Steam rises leaving behind dead microbes, dissolved solids, salts, heavy metals and other contaminants which may be in the source water.
- (3) Low boiling point light gases are discharged through the gaseous vent.
- (4) Steam is condensed in the three level Stainless Steel tray assembly.
- (5) Purified and distilled water is captured in the collection cup assembly.
- (6) The 100% Steam Distilled Water flows through the collection tube into the 3.2 quart stainless steel collection and storage container which is included.
